### CISSP Certified Information Systems Security Professional Dumps

CISSP Certified Information Systems Security Professional Dumps. Buy Unlimited Access Package with 2500+ Exams.

DumpsArena offers real exam questions for practice for all major IT certifications.

For a full set of 1245 Questions. Go to

<https://dumpsarena.co/isc2-dumps/cissp/>

DumpsArena offers detailed explanations to each question which helps to understand the concepts better.

It is recommended to score above 85% in DumpsArena exams before attempting a real exam.

DumpsArena updates Exam Questions Every 2 weeks.

You Will Get Life Time Access and Life Time Free Updates

DumpsArena assures 100% pass guarantee in first attempt.

Below Are The Free Sample Questions.

Question 1:

Which of the following domains is included in the CISSP Common Body of Knowledge (CBK)?

- A. Web Development and Programming
- B. Business Analysis and Forecasting
- C. Security and Risk Management
- D. Database Optimization Techniques

Correct Answer: C. Security and Risk Management

Explanation:

The CISSP exam is based on the (ISC)<sup>2</sup> Common Body of Knowledge (CBK), which comprises eight domains, including Security and Risk Management. This domain is foundational as it introduces critical topics like confidentiality, integrity, and availability, alongside governance, compliance, and risk analysis principles. Understanding this domain is essential for any CISSP candidate, and DumpsArena's CISSP Certified Information Systems Security Professional Dumps provide in-depth practice questions that reflect real exam formats. These materials help candidates internalize key concepts and improve their ability to tackle scenario-based questions effectively.

Question 2:

What is the primary purpose of access control in information security?

- A. To improve system performance
- B. To prevent all forms of cyberattacks
- C. To ensure only authorized individuals can access resources
- D. To track employee working hours

Correct Answer: C. To ensure only authorized individuals can access resources

Explanation:

Access control is a critical aspect of information security that ensures users have appropriate permissions to access systems and data. It helps protect against unauthorized access, data breaches, and privilege escalation. There are several types of access control mechanisms like DAC, MAC, and RBAC. Understanding the nuances of each is crucial for the CISSP exam, and DumpsArena offers targeted practice in this area. Their dumps provide context-rich questions that reflect real-world

scenarios, enhancing a candidate's readiness for the exam.

Question 3:

Which of the following best defines the concept of defense in depth?

- A. Using multiple firewalls in the network
- B. Relying on antivirus software only
- C. Implementing layered security controls across systems
- D. Encrypting only sensitive files

Correct Answer: C. Implementing layered security controls across systems

Explanation:

Defense in depth is a security strategy that applies multiple layers of defense (physical, technical, and administrative) to protect data and systems. This approach minimizes the risk of a complete system compromise if one layer fails. It's a core concept tested in the CISSP exam, especially in the Security Architecture and Engineering domain. DumpsArena's CISSP dumps include scenario-based questions that train candidates to identify and apply defense-in-depth principles effectively. Their dumps simulate real exam complexity, reinforcing a strong grasp of layered security models.

Question 4:

In the context of cryptography, what does the term "non-repudiation" refer to?

- A. Encrypting data to prevent leaks
- B. Compressing data for secure transfer
- C. Ensuring a sender cannot deny sending a message
- D. Blocking spam messages from reaching users

Correct Answer: C. Ensuring a sender cannot deny sending a message

Explanation:

Non-repudiation is a security principle that guarantees the authenticity and integrity of a message, ensuring that the sender cannot deny the transmission. It typically involves the use of digital signatures and audit logs. This concept is thoroughly tested under the Communication and Network Security and Security Engineering domains of the CISSP exam. DumpsArena's resources provide clear examples and technical breakdowns of how non-repudiation works in various systems. Practicing with their CISSP Certified Information Systems Security Professional Dumps enhances understanding of such nuanced topics.

Question 5:

Which of the following would be considered a physical security control?

- A. Security awareness training
- B. Biometric access systems
- C. Firewall configuration
- D. Two-factor authentication

Correct Answer: B. Biometric access systems

Explanation:

Physical security controls are mechanisms that physically restrict access to critical infrastructure or sensitive data. Biometric access systems like fingerprint scanners or retina readers fall into this category. While other options like firewalls and two-factor authentication are logical or administrative controls, biometrics directly control physical entry. The CISSP exam expects candidates to distinguish between these types of controls. DumpsArena's practice dumps present layered security control scenarios that

help learners categorize and evaluate controls accurately, enhancing real-world application and exam performance.
